1. e4 e5 2. **②**f3 d6

 $^{^1\}mathrm{Une}$ étoile apparaı̂t à côté du nom du vainqueur de la partie.

²Le carré blanc indique le joueur avec les pièces blanches.

³La date à laquelle la partie a été jouée.

⁴Le carré noir indique le joueur avec les pièces noires.

⁵Le nom de l'événement ou du tournoi.

 $^{^6\}mathrm{Le}$ contrôle de temps de la partie (par ex., 60+1 signifie 60 secondes de base avec un incrément de 1 seconde par coup).

 $^{^7\}mathrm{Les}$ coups de la partie sont listés en notation figurine, où un symbole représente chaque pièce.

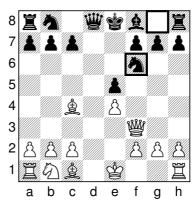

⁸Cette section détaille l'ouverture jouée dans la partie. Elle inclut le nom officiel de l'ouverture, son code ECO (Encyclopédie des ouvertures d'échecs), la séquence de coups qui la définit, et un diagramme montrant la position après que ces coups ont été joués.

6. Fc4 Cf6¹⁰

¹²Éval. : +1.09c | Perte : 49c Bon Coup (Meilleur : f3b3)

Éval. : +2.24c | Perte : 99c Imprécision (Meilleur : d8f6)

 $^{^9{\}rm Un}$ résumé de l'analyse par ordinateur, incluant la perte moyenne de centipions (CPL) pour chaque joueur. Un CPL plus bas est meilleur.

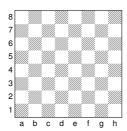

¹⁰Ce titre rappelle la paire de coups en notation algébrique standard.

¹¹Les diagrammes d'échiquier sont affichés pour chaque paire de coups. L'échiquier de gauche montre la position après le coup des Blancs, et celui de droite après la réponse des Noirs. Les cases de départ et d'arrivée de chaque coup sont mises en évidence. Un roi encerclé est en échec ; un roi encerclé avec une croix est en échec et mat.

 $^{^{12}\}mathrm{L'\acute{e}valuation}$ est toujours du point de vue des Blancs : une valeur positive indique un avantage pour les Blancs, une valeur négative un avantage pour les Noirs. Le score est soit une valeur numérique exprimée en centipions (1/100ème de pion), soit une chaîne comme MX (Mat en X coups). Par exemple, un score de +1.50c signifie que les Blancs ont un avantage de 1.5 centipion, tandis que -M3 signifie que les Noirs ont un mat forcé en 3 coups. | Perte : La perte en centipions pour le coup joué par rapport au meilleur coup du moteur. (Bon Coup, Erreur, Gaffe) : Une classification du coup basée sur la perte en centipions. Meilleur : Le coup préféré du moteur s'il diffère de celui joué.

Notation Algébrique Standard/Figurine (NAS/NAF)

La notation échiquéenne est un système pour enregistrer les coups d'une partie. L'échiquier est une grille où chaque case a une coordonnée unique, de a1 à h8.

Noms et Symboles des Pièces

Pièce	Symbole (NAS)	Symbole (NAF)
Roi	R	\$ / \$
Dame	D	" / "
Tour	${ m T}$	
Fou	F	₾ / •
Cavalier	\mathbf{C}	Ø / 🕭
T. /1		

Pion (lettre omise dans la notation)

Coups et Symboles Spéciaux

- x : Indique une capture (par ex., Cxf3 signifie qu'un Cavalier capture en f3).
- e.p. : Indique une capture « en passant », une capture spéciale du pion qui ne peut se produire qu'immédiatement après qu'un pion a avancé de deux cases depuis sa case de départ.
- ullet + : Indique un échec # : Indique un échec et mat.
- \bullet O-O : Petit roque. O-O-O : Grand roque.
- ullet =**D** : Indique qu'un pion est promu en Dame (par ex., e8=D).
- Lorsque deux pièces identiques peuvent se déplacer sur la même case, la colonne ou la rangée de départ est ajoutée pour éviter toute ambiguïté (par ex., Cbd2 ou T1e2).

Exemples en Contexte

- Coup : Cf3 ou 15f3 Une pièce se déplace vers une nouvelle case.
- Capture : Cxf3 ou ②xf3 Une pièce capture une pièce adverse sur une nouvelle case.
- Petit Roque : 0-0 Un coup spécial impliquant le Roi et la Tour du côté du Roi.
- Grand Roque : 0-0-0 Un coup spécial impliquant le Roi et la Tour du côté de la Dame.
- **Promotion** : e8=D Un pion atteint la dernière rangée et est promu en une autre pièce (généralement une Dame).
- Échec: Dh5+ ou **\$\mathbb{\ma**
- Échec et Mat : Dh7# ou **\cup h**7# Un coup qui met le Roi adverse en échec et mat, terminant la partie.

Comprendre les Contrôles de Temps

Aux échecs, un contrôle de temps est un mécanisme qui limite le temps total dont dispose chaque joueur pour effectuer tous ses coups. Les parties de cette collection ont été jouées sous différents contrôles de temps, qui sont exprimés dans l'un des deux formats principaux :

- Le format X+Y (par ex., 60+1) indique un contrôle de temps avec *incrément*. Chaque joueur commence avec X secondes à son horloge, et après chaque coup joué, Y secondes supplémentaires sont ajoutées à son temps restant. Cela garantit qu'un joueur ne perdra jamais au temps tant qu'il joue assez vite.
- Un nombre unique (par ex., 300) indique le nombre total de secondes dont dispose chaque joueur pour toute la partie, sans aucun incrément.
- Le format 1/86400 représente un contrôle de temps *journalier* ou par *correspondance*, où les joueurs disposent d'un jour (86 400 secondes) pour jouer chaque coup.

Contrôles de Temps dans cette Collection :
